

## SimpleRisk Release Notes

(20211010-001)

If you are not already running SimpleRisk, then you will need to [DOWNLOAD](#) it and follow the instructions for your chosen installation method. If you are currently running a previous release of SimpleRisk, then you will need to go to your Configure menu, select Register & Upgrade, and then click the “Upgrade the Application” button. This will run both the application and database upgrades to move you to the most recent release.

**The complete list of changes for this release is below:**

### **SimpleRisk Core**

#### **Usability**

- Updated the memory limit healthcheck to handle -1 and not set values.

#### **Bug Fixes**

- Fixed an issue where the modal windows for adding new controls would not close when adding a new control.
- Fixed an issue where deleted controls would still be displayed.

### **SimpleRisk Extras**

#### **Upgrade Extra**

- Fixed an issue where the Upgrade Extra was unable to function with active extras in some circumstances.

#### **Risk Assessment Extra**

- Fixed an issue that prevented the upgrade script from executing when activating the extra.

#### **Import/Export Extra**

- Fixed an issue where having Customization Extra off would prevent the system from being able to export properly.

#### **Compliance Forge SCF Extra**

- Moved the SCF to the SimpleRisk github to prevent issues obtaining the SCF for installation into SimpleRisk.
- Fixed an issue where users could receive an error regarding a table already existing when working with the Compliance Forge SCF extra.

#### **Vulnerability Management Extra**

- Fixed an issue that would prevent the extra from installing

### **Other Notes**

- A SimpleRisk user noted that they were having difficulty logging in with the default username of “admin” with password of “admin”. Upon investigation, it was discovered that PHP was enforcing secure cookies, but the application was not using SSL, so the session values were not set. This may be an isolated instance, but if you experience this issue, try installing a SSL certificate and run SimpleRisk over HTTPS to fix it.
