

SimpleRisk Release Notes

Version: 20241209-001

If you are not yet running SimpleRisk, please download it and follow the installation instructions for your chosen method. If you're currently running a previous release, go to the Configure menu, select Register & Upgrade, and click Upgrade the Application. This will upgrade both the application and database to the latest release.

SimpleRisk Core

Bug Fixes:

- Resolved an issue preventing backups from completing due to a missing variable.
 - Resolved an issue where an error occurred when attempting to order columns in the Active Audits datatable.
 - Fixed a bug causing a page load failure when editing a mitigation that had a control attached due to a datatable error.
 - Resolved a bug where a datatable error occurred when performing a self-assessment and clicking on mitigation actions.
 - Fixed an issue where clicking the "Generate Report" button failed to render the graph on the Graphical Risk Analysis page.
 - Fixed a bug where text was improperly wrapped and partially hidden in input fields on the Document Program.
 - Corrected an issue where the phone number field accepted special characters and text, which should only accept numeric input.
 - Resolved an issue where editing risks and mitigations became slow if the system had a large number of files in the 'files' table.
 - Fixed an issue where enabling a large number of frameworks caused the Define Tests page to fail due to long URI requests.
 - Fixed an issue where the file upload widget was displayed in pages where file uploads were not supported.
-

SimpleRisk Extras

Incident Management Extra:

- Introduced a new feature that allows for the creation of a Dynamic Incident Report.

- Fixed a bug where an incident could be created without a summary field, ensuring data integrity.
- Fixed an issue where values weren't displaying dynamically from the database and were hardcoded instead in the Prioritization tab.

Risk Assessment Extra:

- Added the ability to export questionnaire results directly to a spreadsheet.
- Resolved an issue where users without permission to access the Assessments module were not visible as assessment contacts when sending questionnaires.
- Fixed an issue where the Phone value was incorrectly required in the Assessment Contacts section.
- Fixed an issue where ordering of columns in the Actions section caused errors when clicked on the Assessments → Assessment Contacts page.
- Restored the display of Question # in questionnaire results, as it was unintentionally omitted in previous versions.

Other Notes:

- A user reported difficulty logging in with the default username "admin" and password "admin". Investigation revealed that PHP was enforcing secure cookies, but the application was not using SSL, preventing session values from being set. If you encounter this issue, try installing an SSL certificate and running SimpleRisk over HTTPS to resolve it.
