

SimpleRisk Release Notes

(20210713-001)

If you are not already running SimpleRisk, then you will need to [DOWNLOAD](#) it and follow the instructions for your chosen installation method. If you are currently running a previous release of SimpleRisk, then you will need to go to your Configure menu, select Register & Upgrade, and then click the “Upgrade the Application” button. This will run both the application and database upgrades to move you to the most recent release.

The complete list of changes for this release is below:

SimpleRisk Core

Usability

- The audit trail now records actions related to the Document Program.

Bug Fixes

- Fixed an issue with some small icons and symbols that would not be displayed properly.
- Fixed an issue where the Additional Stakeholders field would not be displayed as intended.

SimpleRisk Extras

Upgrade Extra

- Updated the extra to update the database to the latest version instead of just the next version.
- Added new checks before an upgrade to avoid issues that could make the upgrade fail.

Custom Authentication

- Updated the extra to use the SimpleSAMLphp files that are now provided in the SimpleRisk Core.

Other Notes

- A SimpleRisk user noted that they were having difficulty logging in with the default username of “admin” with password of “admin”. Upon investigation, it was discovered that PHP was enforcing secure cookies, but the application was not using SSL, so the session values were not set. This may be an isolated instance, but if you experience this issue, try installing a SSL certificate and run SimpleRisk over HTTPS to fix it.
