

## SimpleRisk Release Notes

(20201106-001)

This SimpleRisk version is a fix for an issue affecting uploads on version 20201005-001. Files uploaded on that version that are not text based will need to be re-uploaded on at least the 20201106-001 version of SimpleRisk to avoid any lost or broken files.

If you are not already running SimpleRisk, then you will need to [DOWNLOAD](#) it and follow the instructions for your chosen installation method. If you are currently running a previous release of SimpleRisk, then you will need to go to your Configure menu, select Register & Upgrade, and then click the “Upgrade the Application” button. This will run both the application and database upgrades to move you to the most recent release.

**The complete list of changes for this release is below:**

### **SimpleRisk Core**

#### **Bug Fixes**

- Fixed an issue where uploaded files were broken when trying to download. All subsequent uploads to the update will now download as expected.

### **Other Notes**

- A SimpleRisk user noted that they were having difficulty logging in with the default username of “admin” with password of “admin”. Upon investigation, it was discovered that PHP was enforcing secure cookies, but the application was not using SSL, so the session values were not set. This may be an isolated instance, but if you experience this issue, try installing a SSL certificate and run SimpleRisk over HTTPS to fix it.
