

SimpleRisk Release Notes

Version: 20250326-001

If you are not yet running SimpleRisk, please download it and follow the installation instructions for your chosen method. If you're currently running a previous release, go to the Configure menu, select Register & Upgrade, and click Upgrade the Application. This will upgrade both the application and database to the latest release.

SimpleRisk Core

Georetry Fixes:

- Fixed a Reflected XSS vulnerability in install.php.
- Resolved Reflected XSS in the Role Permissions page.
- Patched Stored XSS in /governance/index.php.
- Addressed a potential Reflected XSS issue via the SCF import page.
- Fixed an Open Redirect vulnerability on the login page.

Bug Fixes:

- Resolved an error when saving scope questions with quotation marks.
- Fixed incorrect control count display on the Define Tests page.
- Corrected a failure to create GRC records due to an invalid class.
- Fixed an issue where deleted controls still appeared in the control framework.
- Resolved framework import issues related to whitespace trimming.
- Fixed improper redirect behavior after updating a role.
- Addressed problems with control IDs not showing correctly in Define Tests.
- Fixed SCF framework import to match new naming conventions.
- Resolved SCF control tag mismatches during import.
- Fixed a bug that prevented tag filtering on the Define Tests page.
- Corrected column misalignment in the GRC Evidence table.

New Functionality:

- Added support for copying user role permissions when duplicating roles.
- Introduced display of active framework versions with highlighting for outdated ones
- The Risk Overview can now be re-arranged and personalized with further customization and additions to come in later releases
- **©** UI and Aesthetic Updates:

- Improved table row spacing and padding on the Risk Register page.
- Refreshed the button styling for consistency across the admin interface.

⊘ N	Code	Cleanup)

SimpleRisk Extras

Secure Controls Framework Extra:

- Fixed SCF upgrade failure due to process errors.
- Refactored SCF import scripts to improve maintainability and error handling.
- Fixed and issue where upgrading the SCF did not properly add new frameworks.

 To the list of available frameworks.

Risk Assessment Extra:

• Fixed a CSS issue causing irregular placement of checkboxes.

Other Notes:

• A user reported difficulty logging in with the default username "admin" and password "admin". Investigation revealed that PHP was enforcing secure cookies, but the application was not using SSL, preventing session values from being set. If you encounter this issue, try installing an SSL certificate and running SimpleRisk over HTTPS to resolve it.
