SimpleRisk Release Notes

Version: 20241113-001

If you are not yet running SimpleRisk, please download it and follow the installation instructions for your chosen method. If you're currently running a previous release, go to the Configure menu, select Register & Upgrade, and click Upgrade the Application. This will upgrade both the application and database to the latest release.

SimpleRisk Core

Usability:
- Increased the size of the Edit, Delete, Copy buttons to ease difficulties clicking them.

Bug Fixes:
- Replaced the old settings cog icon with the new ui element in a few places it was still referencing the old one.

SimpleRisk Extras

Incident Management Extra:
- Updated the table on the Reporting > Lessons Learned page to include a filterable header, setting cog and allow viewing without needing to expand the browser window.

Secure Controls Framework Extra:
- If a lot of frameworks are enabled in the SCF extra the Define Tests page's datatable fails to load due to its request URI being too long

---

Other Notes:

- A user reported difficulty logging in with the default username "admin" and password "admin". Investigation revealed that PHP was enforcing secure cookies, but the application was not using SSL, preventing session values from being set. If you encounter this issue, try installing an SSL certificate and running SimpleRisk over HTTPS to resolve it.
