SimpleRisk Release Notes

(20240102-001)

If you are not already running SimpleRisk, then you will need to [DOWNLOAD](#) it and follow the instructions for your chosen installation method. If you are currently running a previous release of SimpleRisk, then you will need to go to your Configure menu, select Register & Upgrade, and then click the "Upgrade the Application" button. This will run both the application and database upgrades to move you to the most recent release.

The complete list of changes for this release is below:

SimpleRisk Core

Usability
- Added the ability to select an Asset then select from a dropdown of the currently defined risks in the system and save the asset to the selected risks

Bug Fixes
- Fixed an issue where the Create new Exception modal did not display the rich text editor correctly.

SimpleRisk Extras

Import/Export Extra
- Fixed an issue preventing import updating assets when the Associated Risks column is mapped but no value is supplied.

Encryption Extra
- Fixed an issue which made decryption of instances with vulnerability management extra difficult or not possible.
- Fixed an issue where Encryption Extra could cause duplicate assets.

Risk Assessment Extra
- Added new filters to the top of the Questionnaires table.
- Added a settings cog allowing users to customize the displayed columns on the Questionnaires table.

Notification Extra
- Added individual table variables for the Unreviewed and Past Due Risk review notifications.
- Fixed the View Test Audit variable to correctly display "View the Test" and no longer states incorrectly "View the Risk".
- Fixed various issues regarding the display of links and rich text in Notification emails.

Other Notes

- A SimpleRisk user noted that they were having difficulty logging in with the default username of "admin" with password of "admin". Upon investigation, it was discovered that PHP was enforcing secure cookies, but the application was not using SSL, so the session values were not set. This may be an isolated instance, but if you experience this issue, try installing a SSL certificate and run SimpleRisk over HTTPS to fix it.
