SimpleRisk Release Notes

(20220909-001)

If you are not already running SimpleRisk, then you will need to DOWNLOAD it and follow the instructions for your chosen installation method. If you are currently running a previous release of SimpleRisk, then you will need to go to your Configure menu, select Register & Upgrade, and then click the "Upgrade the Application" button. This will run both the application and database upgrades to move you to the most recent release.

The complete list of changes for this release is below:

SimpleRisk Core

Bug Fix
- Fixed an issue when creating an Exception in the Governance module risks would not show up in the associated risks dropdown if any mitigation information was associated with the risk.

SimpleRisk Extras

Import-Export Extra

- Fixed an issue where pulling new assessments and frameworks from the Content page in the Configure menu would not function properly.
- Fixed an issue where users could not import risks that were closed without importing close-out information.
- Fixed an issue where updating an asset via import would cause an error if all columns were not mapped.
- Added the ability to import control tests.
- Added the ability to export control tests.

Compliance Forge SCF Extra

- Updated the SCF to 2022.2.1.
- Resolved an issue where the Supplemental Guidance field would store "#Name?" for compliance forge controls.

Customization Extra

- Fixed an issue where risk details could not be viewed if the template that risk used was deleted.

Other Notes

- A SimpleRisk user noted that they were having difficulty logging in with the default username of "admin" with password of "admin". Upon investigation, it was discovered that PHP was enforcing secure cookies, but the application was not using SSL, so the session values were not set. This may be an isolated instance, but if you experience this issue, try installing a SSL certificate and run SimpleRisk over HTTPS to fix it.
