

# SimpleRisk Release Notes

**Version:** 20260519-001

If you are not currently running SimpleRisk, please download the application and follow the installation instructions for your preferred method.

If you are running a previous release, navigate to **Configure** → **Register & Upgrade** and click **Upgrade the Application**. This process upgrades both the application and the database to the latest release.

## Security Issues

- Hardened input validation on dynamic risk report filtering.
- Hardened output encoding in the risk connectivity visualizer.
- Tightened permission enforcement on risk scoring updates.
- Corrected permission enforcement on the close-risk API.
- Corrected permission enforcement on the project detail and edit APIs.
- Hardened redirect handling in the compliance download flow.
- Hardened authorization on validation-file downloads.
- Enforced report-level access checks on the Favorites API for add, delete, and list operations.

## New Functionality

- Added the Test Date column to the Compliance > Active Audits page.
- Added a user permission that is required to delete active audits.
- Added the ability to designate specific individuals who should always be notified for any Action or Scheduled notification.
- Refreshed the Upgrade Extra with several improvements to the in-product upgrade flow.
- Added more detailed reasons to authentication-failure log entries to help administrators diagnose login problems.
- The installer now generates config.php from a template instead of requiring manual editing.
- Added a Cross-Domain subsection to the Reporting permissions and audited the existing permissions for completeness.
- Replaced the 32-entry Reports sidebar dropdown with a new tile-catalog Reports Hub.
- Deprecated the v1 API; new installs default to v2-only, and existing installs can toggle v1 access via an admin setting.
- The Postman API collection is now auto-generated from the OpenAPI annotations on every push to testing and master, keeping the integration surface in sync with what shipped.

- The questionnaire-create API now returns the contact id and accepts a send\_now flag to support programmatic onboarding flows.
- Replaced the legacy top-menu chrome with the new hub experience, added a Cards/List toggle on the Reports Hub, introduced default favorites, and refreshed Help links.
- Folded the Incident Management Reporting menu into the unified Reports and Dashboards Hub.
- Introduced the Settings Hub with a state-aware Extras category that surfaces installed, enabled, and available Extras at a glance.

## Bug Fix

- Fixed an issue where an incident could be related to itself.
- Fixed datatable sorting on the Incidents > Response page.
- Fixed datatable sorting on the Incidents > Lessons Learned page.
- Fixed an issue where adding a note to an open incident redirected to the Closed tab instead of staying on the current page.
- Fixed the Cancel button when editing a Review not closing the edit view.
- Fixed an issue where saving updates to an incident's details did not refresh the page.
- Fixed scheduled assessment resends permanently skipping rows when a cron run was missed on the due date.
- Fixed the Notification Extra not triggering on risk mitigation acceptance when "Notify on Mitigation Update" was enabled.
- Fixed the configured currency symbol not being respected in reports throughout SimpleRisk.
- The sidebar now updates immediately after activating or deactivating the Vulnerability Management Extra, without requiring a page reload.
- Incident Management logs are now removed when the Incident Management Extra is deactivated.
- Fixed scheduled assessment resends multiplying questionnaire sends by the number of configured contacts.
- Fixed assessment "not completed" reminders firing only once instead of recurring at the configured cadence.
- Fixed scheduled assessments being resent multiple times in a single day if a cron job was retried.
- Stabilized intermittent integration test failures.
- Stabilized a flaky Incident Management test interaction.
- Fixed orphaned permission-to-user rows being left behind when a permission is deleted.
- Resolved PHP deprecation warnings and guarded against a missing user\_mfa table when upgrading from older versions.
- Fixed the database backup workflow.
- Fixed flags missing on some environments after upgrade.
- Fixed a fatal error when backing up a large database.
- Resolved several issues affecting the in-product upgrade flow.

- Fixed an issue with the login redirect flow.
- Resolved a fatal error on the Incident Management dashboard and added a helper used by other Extra integrations.
- Permission refresh on session updates now properly filters by the affected user id, so changes only refresh the intended user's sessions.
- Fixed several bugs in the Incident Management module.
- On the Reports Hub, Document Control Mapping is now shown only for Governance, and the Asset filter chip has been renamed for clarity.
- Session cleanup now reliably matches the correct user when a user is removed or suspended.
- Resolved static-analysis findings around double-encoding in display and reporting code paths.
- Fixed admin-user direct permissions being wiped when activating a paid Extra.
- Fixed the Reports Hub and Settings Hub catalogs and favorites failing to load when SimpleRisk is installed under a subpath; fixed the same condition affecting the workflow editor's enable/disable and save actions.

## **Aesthetics / User-Interface**

- Updated the start\_date and detection\_date datepickers to match the styling of other datepickers throughout the application.
- On Incident Management > Incidents > Lessons Learned, clicking Cancel in the column-settings modal now properly reverts unsaved changes regardless of the selected column.
- On Incident Management > Reporting > Dynamic Incident Report, clicking Cancel in the column-settings modal now properly reverts unsaved changes.
- Hub tiles now show a pointer cursor on hover so they clearly read as clickable.

## **Performance / Availability**

- Assessments Extra now activates roughly 14x faster on new installs.

## **SimpleRisk Extra Development**

- Hardened the SAML authentication Extra with improvements to secret-salt generation, certificate regeneration, metadata caching, and clean teardown on deactivation.
- Assessments Extra API endpoints now use granular per-feature permissions instead of a single broad admin gate.
- SCF Extra: fixed deactivation crashes, column rename handling, catalog threshold logic, and the upgrade path for SCF 2026.1.x.

## **Code Cleanup**

- Refactored the documents table to use mapping tables instead of comma-separated varchar(500) columns for controls, frameworks, additional stakeholders, and teams.
- Retired the Windows-specific installer path; the codebase now uses a single tar-based archive format on all supported platforms.
- Renamed legacy DataTables 1.x class selectors to their DataTables 2.x equivalents.
- Quieted spurious global-variable warnings in simplerisk.log.

## **Other**

- Fixed the Cancel button in the Column Selections dialog incorrectly selecting all options.
- Added the approval date to the Document Program table so users can see when documents were last approved without opening each entry.
- Fixed users being unable to approve assessments that are pending review or approval.
