

SimpleRisk Release Notes

Version: 20261003-001

This is a redesign-heavy release: the pages where you submit and review risks, manage assets, and maintain your profile have all been rebuilt, alongside security hardening and a round of fixes across Governance, Compliance, and several Extras.

If you are not currently running SimpleRisk, please download the application and follow the installation instructions for your preferred method.

If you are running a previous release, navigate to **Configure** → **Register & Upgrade** and click **Upgrade the Application**. This process upgrades both the application and the database to the latest release.

SimpleRisk Core

New Functionality

- Redesigned Submit Risk and the risk detail/edit pages with a faster, card-based layout. Risk Scoring now shows live inline score cards for all six scoring methods instead of a separate dialog.
- Redesigned asset management around a single Manage assets page, an asset window with inline editing, and asset groups alongside assets.
- Added Asset Scoring (FIPS 199 categorization and a weighted score) with columns, filters, and settings.
- Added asset discovery for scanning a network range.
- Added finer-grained asset permissions.
- Redesigned the My Profile page with stronger account security controls.
- Added a Columns picker to Define Control Frameworks for showing or hiding control fields, including Control Class, Control Phase, Control Priority, Control Type, and custom control fields. Column choices are remembered per user.
- Enterprise-type control Status now updates automatically from its tests' latest result.

Bug Fix

- Fixed the Review Risk "All" status filter hiding risks with no pending mitigation or review.
- Fixed the Add Asset modal not opening when a custom Long Text field was configured.
- Fixed Define Tests rich-text fields sometimes saving as blank or stale when saved right after typing.
- Fixed Submit Risk assigning every team to a risk when none was specified.
- Fixed new user accounts not defaulting to the instance's configured language.
- Fixed the team and user lists showing entries outside the selected business unit to administrators.
- Fixed a background job failure that could prevent the Data Integrity scan from running.
- Fixed risk mitigation and review text appearing as encrypted text in the API on instances using the Encrypted Database Extra.
- Asset names and asset group names are now trimmed and compared case-insensitively.

Security Issues

- Strengthened the built-in browser content security protections and enabled them by default for new installations.
- Hardened access controls on the risk information shown in Governance Exceptions.

Code Cleanup

- Updated the DataTables table library to 3.1.

SimpleRisk Extras

Extra Updates

- Assessments: Fixed questionnaire completion notifications not reaching the Owner or Additional Stakeholders.
- Notification: Fixed audit test and risk notifications being sent to unrelated administrators.
- Customization: Extended card-layout customization to the redesigned risk pages and the asset window.
- Import/Export: Fixed a zero-value (lowest level) maturity being replaced by the default on Control import.
- Import/Export: Imported users are now given permissions based on their assigned role when no permissions are mapped.
- ComplianceForge SCF: Fixed the SCF 2026.3 update failing to import.
- ComplianceForge SCF: Existing controls keep their tests and links through the SCF 2026.3 renumbering.
