

SimpleRisk Release Notes

Version: 20260828-001

This release redesigns Manage Audits and Initiate Audits into a single filterable view, keeps AI-generated risk analysis current automatically, and continues our ongoing security hardening program, alongside a set of import, workflow, and single sign-on fixes.

If you are not currently running SimpleRisk, please download the application and follow the installation instructions for your preferred method.

If you are running a previous release, navigate to **Configure** → **Register & Upgrade** and click **Upgrade the Application**. This process upgrades both the application and the database to the latest release.

SimpleRisk Core

Security Issues

- Authorization refusals on API endpoints now return a clear error response instead of a redirect
- Strengthened outbound request validation for workflow webhook and messaging actions so it applies
- Fixed a data-isolation issue in cached AI risk analysis results so they respect team-separation
- Hardened authorization checks on risk associations shown on the Manage Audits and Initiate Audits
- Hardened access control on risk-management review actions and strengthened handling of passwords
- Escaped a translation string rendered in an HTML attribute on Manage Audits and Initiate Audits.

New Functionality

- **AI risk analysis now automatically re-runs** when a risk's connected records change, so cached
- **Manage Audits and Initiate Audits were redesigned** into a single filterable, bulk-selectable

Performance / Availability

- Improved the performance of search on the Define Control Frameworks page, including searches by
- Improved the reliability of scheduled background jobs.

Bug Fix

- Incidents can now have their Functional Impact, Information Impact, and Recovery Effort scores
- Fixed default risk-workflow emails not sending on instances without the Workflows Extra installed.
- Fixed the mitigating-control fail mapping missing from exported Risk Assessment questionnaires.
- Fixed an issue where a policy with a large number of associated controls could silently drop some
- Fixed data grids failing to load after importing data containing special characters.
- Fixed the Self-Assessments Status filter and the Pending Risks by-control filter, which were not
- Fixed framework names not displaying correctly on Manage Audits and Initiate Audits with the
- Improved Manage Audits and Initiate Audits to display cleanly across a much wider range of screen
- Fixed an issue that could prevent SAML-based single sign-on from working.

SimpleRisk Extras

Workflows Extra

- Fixed a false "could not be decrypted" alert and blank user names when creating a workflow with

Vulnerability Management Extra

- Fixed vulnerability findings not matching correctly to assets on InsightVM, InsightVM Cloud,
