

SimpleRisk Release Notes

Version: 20260917-001

This release redesigns Plan Projects and consolidates three risk-review pages into one unified queue, alongside a batch of fixes across assessments, questionnaires, and AI-assisted context questions.

If you are not currently running SimpleRisk, please download the application and follow the installation instructions for your preferred method.

If you are running a previous release, navigate to **Configure** → **Register & Upgrade** and click **Upgrade the Application**. This process upgrades both the application and the database to the latest release.

SimpleRisk Core

New Functionality

- Redesigned Plan Projects as a searchable, sortable priority table, with an expandable per-project risk list showing planned mitigation dates, an Unassigned risks queue for single and bulk assignment, a summary of risks closed by completed projects, and project actions available from every status instead of only Active.
- Replaced the Plan Mitigations, Perform Reviews, and Review Risks Regularly pages with one unified Review Risk queue, with drag-to-reorder columns, bulk actions, and an insights band.
- Added a Select All N option for bulk actions across six data grids, so users can act on more items than fit on a single page.

Bug Fix

- Fixed assessment attachments being deleted whenever a draft or completed assessment was saved.
- Fixed the Required setting on multi-select questionnaire questions not being enforced when the questionnaire was submitted.
- Fixed the Questionnaire Questions table losing its template filter after deleting a question.
- Fixed vulnerability scan results not linking to the correct asset on some scanner platforms.
- Fixed the AI Context Questions page not saving multi-select answers after a page reload.
- Fixed the Country/Region field on AI Context Questions sometimes showing no options to select.
- Fixed an upgrade migration running out of memory on installations with a large sessions table.
- Fixed a login issue that could occur during the brief window while a database upgrade is in progress.
- Fixed the mapped controls list not displaying on a risk's Mitigation tab.
- Fixed the Mapped Control Frameworks count sometimes undercounting a control's actual number of framework mappings.
- Fixed the Mapped Control Frameworks count on Define Control Frameworks showing only one framework and control when the page was filtered to a single framework.

Security Issues

- Hardened output handling for risk owner, team, and reviewer names shown on the Review Risk grid.

Performance / Availability

- Improved the load time of the Control Pass Rate KPI on the Home and Compliance dashboards.

SimpleRisk Extras

Import/Export Extra

- Removed three retired column-layout fields from the User export.
