

SimpleRisk Release Notes

Version: 20260519-001

If you are not currently running SimpleRisk, please download the application and follow the installation instructions for your preferred method.

If you are running a previous release, navigate to **Configure** → **Register & Upgrade** and click **Upgrade the Application**. This process upgrades both the application and the database to the latest release.

Security Issues

- SR-1699: Hardened input validation on dynamic risk report filtering.
- SR-1700: Hardened output encoding in the risk connectivity visualizer.
- SR-1701: Tightened permission enforcement on risk scoring updates.
- SR-1702: Corrected permission enforcement on the close-risk API.
- SR-1703: Corrected permission enforcement on the project detail and edit APIs.
- SR-1704: Hardened redirect handling in the compliance download flow.
- SR-1705: Hardened authorization on validation-file downloads.
- SR-1742: Enforced report-level access checks on the Favorites API for add, delete, and list operations.

New Functionality

- SR-194: Added the Test Date column to the Compliance > Active Audits page.
- SR-196: Added a user permission that is required to delete active audits.
- SR-336: Added the ability to designate specific individuals who should always be notified for any Action or Scheduled notification.
- SR-1729: Refreshed the Upgrade Extra with several improvements to the in-product upgrade flow.
- SR-1732: Added more detailed reasons to authentication-failure log entries to help administrators diagnose login problems.
- SR-1734: The installer now generates config.php from a template instead of requiring manual editing.
- SR-1736: Added a Cross-Domain subsection to the Reporting permissions and audited the existing permissions for completeness.
- SR-1737: Replaced the 32-entry Reports sidebar dropdown with a new tile-catalog Reports Hub.

- SR-1743: Deprecated the v1 API; new installs default to v2-only, and existing installs can toggle v1 access via an admin setting.
- SR-1744: The Postman API collection is now auto-generated from the OpenAPI annotations on every push to testing and master, keeping the integration surface in sync with what shipped.
- SR-1748: The questionnaire-create API now returns the contact id and accepts a send_now flag to support programmatic onboarding flows.
- SR-1749: Replaced the legacy top-menu chrome with the new hub experience, added a Cards/List toggle on the Reports Hub, introduced default favorites, and refreshed Help links.
- SR-1751: Folded the Incident Management Reporting menu into the unified Reports and Dashboards Hub.
- SR-1752: Introduced the Settings Hub with a state-aware Extras category that surfaces installed, enabled, and available Extras at a glance.

Bug Fix

- SR-389: Fixed an issue where an incident could be related to itself.
- SR-715: Fixed datatable sorting on the Incidents > Response page.
- SR-716: Fixed datatable sorting on the Incidents > Lessons Learned page.
- SR-718: Fixed an issue where adding a note to an open incident redirected to the Closed tab instead of staying on the current page.
- SR-735: Fixed the Cancel button when editing a Review not closing the edit view.
- SR-736: Fixed an issue where saving updates to an incident's details did not refresh the page.
- SR-758: Fixed scheduled assessment resends permanently skipping rows when a cron run was missed on the due date.
- SR-892: Fixed the Notification Extra not triggering on risk mitigation acceptance when "Notify on Mitigation Update" was enabled.
- SR-1328: Fixed the configured currency symbol not being respected in reports throughout SimpleRisk.
- SR-1639: The sidebar now updates immediately after activating or deactivating the Vulnerability Management Extra, without requiring a page reload.
- SR-1647: Incident Management logs are now removed when the Incident Management Extra is deactivated.
- SR-1668: Fixed scheduled assessment resends multiplying questionnaire sends by the number of configured contacts.
- SR-1669: Fixed assessment "not completed" reminders firing only once instead of recurring at the configured cadence.
- SR-1670: Fixed scheduled assessments being resent multiple times in a single day if a cron job was retried.
- SR-1675: Stabilized intermittent integration test failures.
- SR-1677: Stabilized a flaky Incident Management test interaction.

- SR-1689: Fixed orphaned permission-to-user rows being left behind when a permission is deleted.
- SR-1723: Resolved PHP deprecation warnings and guarded against a missing user_mfa table when upgrading from older versions.
- SR-1724: Fixed the database backup workflow.
- SR-1725: Fixed flags missing on some environments after upgrade.
- SR-1726: Fixed a fatal error when backing up a large database.
- SR-1728: Resolved several issues affecting the in-product upgrade flow.
- SR-1730: Fixed an issue with the login redirect flow.
- SR-1731: Resolved a fatal error on the Incident Management dashboard and added a helper used by other Extra integrations.
- SR-1735: Permission refresh on session updates now properly filters by the affected user id, so changes only refresh the intended user's sessions.
- SR-1738: Fixed several bugs in the Incident Management module.
- SR-1739: On the Reports Hub, Document Control Mapping is now shown only for Governance, and the Asset filter chip has been renamed for clarity.
- SR-1745: Session cleanup now reliably matches the correct user when a user is removed or suspended.
- SR-1746: Resolved static-analysis findings around double-encoding in display and reporting code paths.
- SR-1750: Fixed admin-user direct permissions being wiped when activating a paid Extra.
- PR #1667: Fixed the Reports Hub and Settings Hub catalogs and favorites failing to load when SimpleRisk is installed under a subpath; fixed the same condition affecting the workflow editor's enable/disable and save actions.

Aesthetics / User-Interface

- SR-396: Updated the start_date and detection_date datepickers to match the styling of other datepickers throughout the application.
- SR-1645: On Incident Management > Incidents > Lessons Learned, clicking Cancel in the column-settings modal now properly reverts unsaved changes regardless of the selected column.
- SR-1646: On Incident Management > Reporting > Dynamic Incident Report, clicking Cancel in the column-settings modal now properly reverts unsaved changes.
- PR #1665: Hub tiles now show a pointer cursor on hover so they clearly read as clickable.

Performance / Availability

- SR-1740: Assessments Extra now activates roughly 14x faster on new installs.

SimpleRisk Extra Development

- SR-1733: Hardened the SAML authentication Extra with improvements to secret-salt generation, certificate regeneration, metadata caching, and clean teardown on deactivation.
- SR-1741: Assessments Extra API endpoints now use granular per-feature permissions instead of a single broad admin gate.
- SR-1753: SCF Extra: fixed deactivation crashes, column rename handling, catalog threshold logic, and the upgrade path for SCF 2026.1.x.

Code Cleanup

- SR-1132: Refactored the documents table to use mapping tables instead of comma-separated varchar(500) columns for controls, frameworks, additional stakeholders, and teams.
- SR-1727: Retired the Windows-specific installer path; the codebase now uses a single tar-based archive format on all supported platforms.
- SR-1747: Renamed legacy DataTables 1.x class selectors to their DataTables 2.x equivalents.
- PR #1663: Quieted spurious global-variable warnings in simplerisk.log.

Other

- SR-1101: Fixed the Cancel button in the Column Selections dialog incorrectly selecting all options.
- SR-1321: Added the approval date to the Document Program table so users can see when documents were last approved without opening each entry.
- SR-1649: Fixed users being unable to approve assessments that are pending review or approval.
